Personal projects

Mar.18 – Jan.19

AaHang music streaming application
It was a cross-platform music application, made to stream music by albums and Singers from Afghanistan. It also live-streamed Afghan Radio channels. The application used React-Native as its frontend and Firebase services as its backend..

Feb.19 – Apr.20

Musician booking platform.
A was a platform that facilitates users to book Afghan musicians for various events. The app is developed using ReactJs, PHP, and MySQL as its backend..

Apr.15 – Sep.16

Facebook Visualization.
This was a student project in the Visualization course while I was doing my master's. I implemented a Drill-down visualization technique where Facebook posts were categorized and aggregated. Users could easily have an overview of their amount and type of posts during a period of range.
